DETAILED ACTION

Claims 1-34 are pending in the application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20 and 26-33, drawn to mammalian culture media/supplement, classified in class 435, subclass 404.
- II. Claim 21-25, drawn to a method of producing media/supplement, classified in class 435, subclass 404.
- III. Claim 34 drawn to a method of increasing the viability of embryonic cells, classified in class 435, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

- 1. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the claimed media can be made by different processes. For instance, the media can be made by be adding the supplement to different solutions such as water, saline or medium (see claim 21).
- 2. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 1635

§ 806.05(h)). In the instant case the embryonic cells can be grown in another media such as Hamm's F-10, M16 (see claim 31), or DMEM.

- 3. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated for the following reasons: they are materially different processes with different results. The desired result of Invention II is to produce a media/supplement, while the desired result of Invention III is to increase the viability of cells.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are distinct for the reasons given above and the search required for each Group is different, restriction for examination purposes as indicated is proper.
- 6. A telephone call was made to Mark Kassel on January 10, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
